PROFESSIONAL SUMMARY

Backend engineer with 3 years of experience building high-throughput microservices in Go and Java. Passionate about distributed systems and clean API design. Looking for a senior backend role in a product-focused company.

SKILLS

Languages: Go (primary), Java, Python, SQL

Frameworks: Spring Boot, Gin, gRPC, REST

Databases: PostgreSQL, MySQL, Cassandra, Redis

Messaging: Apache Kafka, RabbitMQ

Cloud/Infra: GCP (Cloud Run, Pub/Sub, BigQuery), Docker, Kubernetes (basic)

EXPERIENCE

Software Engineer -- Grubhub, Chicago, IL (Jul 2021 - Present) [3 years]

- * Built order-routing microservice in Go handling 500k orders/day (P99 < 50ms)
- * Migrated monolith order service to event-driven architecture via Kafka
- * Wrote 200+ unit and integration tests; maintained 95%+ code coverage
- * Collaborated with ML team to integrate real-time ETA prediction model

Junior Software Engineer -- Enova International, Chicago, IL (Jun 2020 - Jun 2021)

- * Developed loan origination API in Java/Spring Boot serving 20k daily requests
- * Fixed critical race condition in payment processing -- prevented \$200k/month in losses
- * Participated in on-call rotation; reduced MTTR from 45min to 12min

EDUCATION

B.S. Computer Engineering -- University of Illinois at Urbana-Champaign, 2020 GPA: 3.7/4.0
